PROFESSIONAL SUMMARY

DevOps Engineer with 5+ years of production DevOps and operations experience, plus 8 years of hands-on Linux experience across Ubuntu, Red Hat, and Debian-based environments. Strong in Kubernetes, CI/CD automation, observability, Infrastructure as Code, and high-availability services for Java, Spring, .NET Core, and PostgreSQL-focused application stacks. At Sebit, progressed from Monitoring Specialist to DevOps Engineer while supporting 1000+ VMs, 10+ Kubernetes clusters, 200+ microservices, and production systems serving up to 2 million active users. Known for turning manual release and monitoring practices into controlled, observable, self-service delivery workflows that help engineering teams develop, deploy, and troubleshoot faster.

SELECTED IMPACT

- Supported production environments at large operational scale: 1000+ VMs, 10+ Kubernetes clusters, 200+ microservices, and up to 2 million active users.
- Standardized reusable GitLab CI/CD and Jenkins deployment workflows, making project onboarding, environment promotion, and release control easier for development teams.
- Helped transform delivery into a more controlled and observable engineering environment by combining CI/CD automation, approval gates, monitoring, logs, metrics, and APM traces.
- Built monitoring foundations from scratch for VM-based systems, monolithic applications, Kubernetes workloads, and core production services.

CORE SKILLS

DevOps & CI/CD: Jenkins, GitLab Runner, GitLab CI/CD, reusable ci.yml templates, Docker, Ansible, Terraform, Bash, Python, Infrastructure as Code

Kubernetes & Containers: Kubernetes, RKE2, Rancher, Kubespray, Helm, EKS, rollouts, rollbacks, service troubleshooting, cluster operations

Monitoring & Observability: Prometheus, Grafana, Alertmanager, Nagios, Zabbix, auto-discovery, Glowroot, Elastic APM, logs, traces, metrics

Linux, Cloud & Platforms: Ubuntu, Red Hat, Debian, VMware, AWS EC2, AWS RDS, Load Balancer, S3, Lambda

Databases, Search & Messaging: PostgreSQL, MySQL, Elasticsearch, Cassandra, Kafka, Memcached, McRouter

Runtime, Middleware & Web: Java runtime, Spring Core, Spring Boot, .NET Core runtime, Nginx, Tomcat

Operations: high availability, capacity planning, incident response, release management, production support

PROFESSIONAL EXPERIENCE

Sebit Information & Education Technologies Inc. | Ankara, Turkey

DevOps Engineer | Sep 2022 - Present

- Converted release workflows into automated, controlled CI/CD paths with Jenkins, GitLab Runner, GitLab CI/CD, Docker, and Ansible, enabling teams to build, deploy, and promote changes faster with clearer ownership.
- Standardized reusable reference ci.yml templates so new projects can connect to a common pipeline, update environment values, and deploy through developer self-service or DevOps-managed workflows.
- Built deployment flows from code push to build, container image creation, static code analysis, beta deployment, and controlled promotion to pre-production and production with QA/developer approval gates.
- Operate 200+ microservices across 10+ Kubernetes clusters with Helm, including chart configuration, values management, rollout/rollback coordination, and service-level troubleshooting.
- Helped move production delivery into a more controlled and observable engineering environment by combining CI/CD automation, approval gates, monitoring signals, logs, metrics, and APM traces.
- Support 1000+ Ubuntu, Red Hat, and Debian VM environments and production services manually and through automation with Ansible, Bash, and Python.
- Install, configure, and administer high-availability production services under load, including PostgreSQL, Elasticsearch, Cassandra, Kafka, Nginx, Tomcat, and Kubernetes-based services.
- Operate Linux-based Java, Spring Core, Spring Boot, and .NET Core runtime stacks, with PostgreSQL used as the primary relational database for many production workloads.
- Investigate production incidents and runtime performance issues using Prometheus, Grafana, Glowroot, Elastic APM, logs, service metrics, and alert signals.

Sebit Information & Education Technologies Inc. | Ankara, Turkey

Monitoring Specialist | Sep 2020 - Sep 2022

- Designed and implemented monitoring infrastructure from scratch for monolithic applications, VM-based systems, and core services using Nagios and Zabbix.
- Automated VM and service discovery, group assignment, and activation of relevant monitoring checks for newly detected infrastructure and application services.
- Monitored infrastructure health across CPU, disk, memory, mounts, services, port listening checks, and application-specific service availability.
- Created custom monitoring scripts and plugins for service availability, infrastructure metrics, and application health checks.
- Expanded observability for microservices and Kubernetes environments with Prometheus, Grafana, and Alertmanager.
- Implemented runtime and application performance visibility with Glowroot and Elastic APM, including response times, error rates, and error trace analysis.
- Analyzed alerts, coordinated incident triage, and improved service visibility across virtual machines, Kubernetes, and application services.

Independent DevOps Consulting | Remote / Turkey

Part-time DevOps Consultant & System Monitoring Specialist | Jun 2024 - Present

- Provide scoped, part-time DevOps, monitoring, and infrastructure support for client systems without positioning the work as a competing full-time role.
- Support HA service setup, deployment automation, observability improvements, and operational troubleshooting for Linux, Kubernetes, Docker, Helm, Jenkins, GitLab, Ansible, and Terraform-based environments.
- Support AWS service setup and management, including EC2, RDS, Load Balancer, S3, and Lambda.
- Create automation scripts and practical runbooks that reduce repetitive operational work and make ongoing support easier to control.

EDUCATION

B.E., Computer Engineering | Gazi University, Faculty of Engineering | 2021
